EXPERIENCE

HUBSPOT - FINTECH | Senior Software Engineer
Feb 2024 – Present | Berlin, DE

Backend Senior Software Engineer for the Fintech Sales Approval System.

- Designed project and led 1 engineer for 1 year to fully regionalize and optimize approval service latency by up to 49%
- Designed project and led 3 engineers for 6 months to reimplement core approval engine, migrating from legacy internal DSL to Java, improving debuggability and monitorability and cutting API response times by ~73%
- Identified organization wide redundancy across regionalizing services and proposed a shared gateway service, built with a Principal Engineer and now used by 21 services across 10 teams
- Mentored intern to support his career growth and guided him in delivering multiple projects
- Worked with frontend team to design and implement APIs and product features
- Improved service reliability, cutting errors and pages by 88% through rigorous coding practices and alert reclassification
- Leveraged Claude Code and internal AI tooling to deliver work in 2026 and set team standards for AI-assisted coding

AMAZON - EERO | SDE 2
Dec 2021 – Dec 2023 | Berlin, DE

Backend Software Development Engineer for eero mobile and hardware teams.

- Led 8+ month cloud initiative, working with mobile and router OS teams to launch eero PoE Gateway, designed and implemented data flow and APIs to connect downstream clients and upstream router, leveraged Scala, PostgreSQL, Play
- Worked collaboratively with cloud, mobile and router OS teams to design and implement APIs and data flow to downstream clients and upstream router to enable the launch of eero PoE Router
- Designed and implemented cloud APIs to support Wifi network ownership transfer to Wifi network admins
- Mentored SDE to support his career growth and help guide him in delivering his first solely owned project
- Oncall for high impact services, some of which received ~7M requests per minute
- Optimized working processes to improve the communication and work effectiveness for globally situated teams

AMAZON - ALEXA AUTOMATIC SPEECH RECOGNITION | SDE 2
Sept 2019 – Nov 2021 | Cambridge, MA

Backend Software Development Engineer for text normalization team building infrastructure for NLP model builders.

- Led project and multiple engineers for over 1 year to re-architect model hosting service to scale using CDK, ECS, S3, CloudWatch, NLB, Route53, SageMaker, API Gateway, KMS, AppConfig
- Aligned with nearly 100 internal teams to drive migration to new model hosting service, negotiating requirements and timelines to align with project goals. Requirements such as model versioning, latency concerns, API functionality, etc.
- Worked with Step Functions, Lambda, S3, DynamoDB, CloudFormation, CloudWatch to build model CI/CD pipeline over 6 months. Aligned with internal teams to drive migration and educate teams on how to integrate with pipeline
- Led 9 month project to deliver automated data annotation pipeline to train neural models, leveraged EC2, S3, DynamoDB
- Maintained high impact service receiving 200M+ requests per day and storing 1600+ language models
- Supported internal customers with service onboarding, resolving live service/model issues and answering questions
- Mentored SDE intern and supported him in delivering neural model C++/Python APIs, leading to a full time offer
- Consolidated and improved team documentation and onboarding practices

LAMBENT SPACES | Software Engineer
Aug 2018 – July 2019 | Boston, MA

Core full stack software engineer building MVP for early customers with a focus on architecting data pipelines for scalability.

- Used Kismet to infer wireless device behavior from one sided 802.11 frames to track devices in a local area
- Worked with Ansible, Terraform and Nomad to manage on-site integrations and cloud service deployments
- Researched and integrated Kafka Streams/Connect to create ETL jobs for high throughput writes to TimescaleDB
- Implemented coding practices by introducing linters, common libraries, exception tracking across multiple projects

JANA MOBILE | Software Engineer
June 2017 – June 2018 | Boston, MA

Full stack software engineer building mCent Browser, a Chromium based browser for Android users in developing countries.

- Built product features used by 1.5M+ users daily on Flask, Cassandra and Kafka, with Snowflake for data warehousing
- Architected, implemented and maintained referral system, supporting analytics, driving over 80% of new users
- Conducted in market user interviews to iterate on and improve user experiences
