EDUCATION

UMASS AMHERST

Computer Science
2014-2017
Major GPA: 3.47 / 4.0
Cum. GPA: 3.36 / 4.0

UCONN STORRS

Electrical Engineering
2013-2014

EXPERIENCE

JANA MOBILE | Software Engineer 1

June 2017 – June 2018 | Boston, MA

Full stack software engineer for the Growth and Core UX team to help build the app mCent Browser, an advertisement based mobile browser for free prepaid phone recharge.

- Used Chromium based Android to create the browser and Flask, Cassandra, Kafka, and Avro for supporting server and Snowflake for data warehousing
- Created and maintained referral system and supporting analytics, driving at its peak over 80% of new users
- Implemented major product features used by over 1.5MM users daily
- Helped architect initial iteration of user inventory system, leveraged to aid the most important draw to the app, free recharge
- Worked in market to uncover app redesign usability and technical issues
- Addressed data issues, from duplicate ids to normalizing inconsistent tables

Software Engineer Intern

May 2016 – Sep 2016 | Boston, MA

Full stack software engineer for the Launch team to build the mobile user acquisition campaign creator Jana Launch.

- Used Angular 1.6, Google's Materialize and Less to deliver client facing website and Flask, Cassandra, Kafka, and Avro for supporting server
- Implemented website event tracking and analytics pipeline to replace third party tracking tool Localytics
- Integrated UTM tracking for clients' product analytics
- Introduced more consistent documentation practices across the team

KRONOS | Service Oriented Software Engineer Intern

June 2015 – Sep 2015 | Chelmsford, MA

Software engineer providing assistance to the Attestation Toolkit team to support Workforce Central, an employee managment system.

- Developed a module and updated interface using Java, JS, JQuery and MSSQL to calculate and manage meal penalties for Puerto Rican workers.
- Tested various fixes, uncovered bugs, and executed simple penetration tests on core modules.

RELEVANT PROJECT WORK

RIPPLES | June 2016 – May 2017 | UMass Amherst, MA | Github://Ripples/Lecture-Viewer

Lead and senior developer for UMass/Ithaca Ripples team tasked to build Lecture Viewer, a simplified lecture presenter for students.

- Architected dockerized Flask, Node.js, Nginx and MySQL microservices for multi university deployment
- Used React and Redux to provide a synchronized multi feed experience for lectures
- Led and recruited team members, balancing their time with the tasks given

FAFOREVER PROJECT | June 2015 – January 2017 | Github://FAForever

Mentored under an open source dev to reimplement FAForever client and API, a community driven lobby for Supreme Commander.

- Built client features using Java, JavaFX, Spring and Gradle along with the Flask based API server
- Took part in regular developer meetings influencing the direction of the project and tech decisions

PARTY SMART | Jan 2016 - May 2016 | UMass Amherst, MA | Github://Cheyans/Party-Smart

Full stack developer and team lead for second iteration of PartySmart, a web app for students to register their parties with UMass.

- Built with Node.js/Express using MongoDB, Google Maps api, and Boostrap
- Led team to help balance their university work with the tasks at hand

HackUmass | Oct 2015 | UMass Amherst, MA | Github://JustinCoon/PartySmart

Full stack developer to implement the first iteration of party smart

- Built with Node.js/Express using MongoDB, Bing Maps api, and Google's Materialize library.
- One of top 8 projects at HackUmass amongst the 69 projects submitted and winner of Umass Off-Campus Student Services sponsor prize.
