SKILLS

Languages: Java, TypeScript, SQL, Python, Scala, JavaScript
Technologies: AWS, Docker, Kafka, MySQL, PostgreSQL
AI: Claude Code, Agent Skills, MCP

EDUCATION

University of Massachusetts Amherst
Computer Science B.S. | 2017

EXPERIENCE

HUBSPOT - FINTECH | Senior Software Engineer
Feb 2024 – Present | Berlin, DE

Backend Senior Software Engineer for the Fintech Sales Approval System, gating sales quotes for a $3.6B-revenue company.

- Led 1-year, AI-assisted regionalization of approval service on ECS, Kafka and MySQL across AWS regions with 1 engineer, restructuring code to cut latency up to 49%
- Designed and implemented project and led 3 engineers for 6 months to reimplement approval engine, migrating from legacy internal DSL to Java, improving debuggability and monitorability and cutting evaluation API latency by ~73%
- Identified organization-wide redundancy across regionalizing services and proposed a shared gateway service, built with a Principal Engineer and now used by 20 services across 10 teams
- Mentored intern on career growth and guided delivery of multiple projects
- Worked with frontend team to design and implement APIs and product features
- Served on-call and cut pages by 88% through an alert redesign and code quality fixes that hardened the system
- Leveraged Claude Code and internal AI tooling to deliver work in 2026 and set team standards for AI coding

AMAZON - EERO | SDE 2
Dec 2021 – Dec 2023 | Berlin, DE

Backend Software Development Engineer for eero mobile and hardware teams.

- Led cloud initiative for over 8 months with mobile and router OS teams to enable the launch of eero PoE Gateway, designing data flows and APIs between downstream clients and upstream routers with Scala, PostgreSQL and Play
- Worked collaboratively with cloud, mobile and router OS teams to design and implement APIs and data flow to downstream clients and upstream router to enable the launch of eero PoE Router
- Designed and implemented cloud APIs to support Wi-Fi network ownership transfer to Wi-Fi network admins
- Mentored SDE through delivery of first solely owned project, supporting career growth
- On-call for high-impact services, some of which received ~7M requests per minute
- Optimized working processes to improve the communication and work effectiveness for globally situated teams

AMAZON - ALEXA AUTOMATIC SPEECH RECOGNITION | SDE 2
Sept 2019 – Nov 2021 | Cambridge, MA

Backend Software Development Engineer for text normalization team building infrastructure for NLP model builders.

- Led project and 4 engineers for over 1 year to re-architect model hosting service to scale using CDK, ECS, S3, CloudWatch, NLB, Route53, SageMaker, API Gateway, KMS and AppConfig
- Aligned with nearly 100 internal teams to drive migration to new model hosting service, negotiating timelines and requirements such as model versioning, latency and API features
- Built model CI/CD pipeline over 6 months with Step Functions, Lambda, S3, DynamoDB, CloudFormation and CloudWatch, then drove adoption and educated internal teams on integration
- Led 9-month project to deliver automated data annotation pipeline for neural models with EC2, S3, DynamoDB
- Maintained high-impact service receiving 200M+ requests per day and storing 1,600+ FST and neural language models
- Supported internal customers with service onboarding, resolving live service and model issues and answering questions
- Mentored SDE intern through delivering neural model C++ and Python APIs, leading to a full-time offer
- Consolidated and improved team documentation and onboarding practices

LAMBENT SPACES | Software Engineer
Aug 2018 – July 2019 | Boston, MA

Core full-stack software engineer building MVP for early customers with a focus on architecting data pipelines for scalability.

- Used Kismet to infer wireless device behavior from one-sided 802.11 frames to track devices in a local area
- Worked with Ansible, Terraform and Nomad to manage on-site integrations and cloud service deployments
- Researched and integrated Kafka Streams and Connect to create ETL jobs for high-throughput writes to TimescaleDB
- Introduced linters, common libraries and exception tracking across multiple projects to standardize coding practices

JANA MOBILE | Software Engineer
June 2017 – June 2018 | Boston, MA

Full-stack software engineer building mCent Browser, a Chromium-based browser for Android users in developing countries.

- Built product features used by 1.5M+ users daily on Flask, Cassandra and Kafka, with Snowflake for data warehousing
- Architected, implemented and maintained referral system, supporting analytics, driving over 80% of new users
- Conducted in-market user interviews to iterate on and improve user experiences
