SKILLS

LANGUAGES & ENVIRONMENTS:

Scala | Python | Typescript | Javascript | Java | SQL
Play | Flask | Node.js | Fargate | Lambda | EC2 | ECS
Docker | Linux | OSX

TOOLS & FRAMEWORKS:

DynamoDB | S3 | Kafka | Postgres | Cassandra | AppConfig
ELB | NLB | Route53 | SageMaker | API Gateway | KMS
Step Functions | CDK | CloudFormation | CloudWatch

EXPERIENCE

AMAZON - EERO | Software Development Engineer 2

December 2021 – Present | Berlin, DE

Backend Software Development Engineer for eero mobile and hardware teams.

- Lead cloud initiative and worked with mobile and router OS teams to enable the launch of eero PoE Gateway, designed and implemented data flow and APIs to connect downstream clients and upstream router, leveraged Scala, PostgreSQL, Play Framework
- Worked collaboratively with cloud, mobile and router OS teams to design and implement APIs and data flow to downstream clients and upstream router to enable the launch of eero PoE Router
- Designed and implemented cloud APIs to support Wifi network ownership transfer to Wifi network admins
- Mentored SDE to support his career growth and help guide him in delivering his first solely owned project
- Oncall for high impact services, some of which received nearly 7 million requests per minute
- Optimized working processes to improve the communication and work effectiveness for globally situated teams

AMAZON - ALEXA AUTOMATIC SPEECH RECOGNITION | Software Development Engineer 2

September 2019 – November 2021 | Cambridge, MA

Backend Software Development Engineer for text normalization team focused on building infrastructure for NLP model builders.

- Lead project and multiple engineers to re-architect model hosting service to scale using CDK, ECS, S3, CloudWatch
- Worked with AWS Step Functions, Lambda, S3 and DynamoDB to design and build model CI/CD pipeline
- Drove survey to gather customer feedback from nearly 100 internal teams to drive migration, model version concerns and latency concerns
- Lead project to deliver semi-automated data annotation pipeline to train neural models
- Maintained high impact service that received 200 million requests per day and stored over 1600 models by resolving live issues, bugs and scaling hosts
- Supported internal customers with service onboarding, resolving live service/model issues and answering questions
- Mentored SDE intern and supported him on delivering neural model C++/Python APIs and be hired by the team
- Consolidated and improved team documentation and onboarding practices

ARMORED THINGS | Software Engineer

August 2018 – July 2019 | Boston, MA

Core full stack software engineer building MVP for early customers with a focus on architecting data pipelines for scalability.

- Used Kismet to infer wireless device behavior from one sided 802.11 frames to track devices in a local area
- Worked with Ansible, Terraform and Nomad to manage on-site integrations and cloud service deployments
- Researched and integrated Kafka Streams/Connect to create ETL jobs for high throughput writes to Timescale db
- Implemented coding practices by introducing linters, common libraries, exception tracking across multiple projects

JANA MOBILE | Software Engineer

June 2017 – June 2018 | Boston, MA

Full stack software engineer building mCent Browser, a chromium based mobile browser for Android users in developing countries.

- Implemented major product features using Flask, Cassandra and Kafka for supporting server and Snowflake for data warehousing used by over 1.5M users daily
- Architected, implemented and maintained referral system, supporting analytics, driving over 80% of new users
- Conducted in market user interviews to iterate on and improve user experiences

EDUCATION

UMASS AMHERST | 2014-2017 | Computer Science B.S.
UCONN STORRS | 2013-2014
